

# BRAILLECHEK

## How it Works

Using high-speed camera technology and custom lighting, BrailleChek examines each Braille embossed carton at full production speed. Cartons with missing dots, poorly formed dots, and other Braille faults can be detected and promptly removed from the machine.

## Benefits

BrailleChek offers folding carton manufacturers the ability to provide customers with peace of mind while eliminating high costs associated with returned, defective product. BrailleChek provides users with rapid return on investment and competitive advantage.
